NOTE: 1” wide by 1” deep mounting surface is recommended to properly install a LARSON Storm Door.

Choose the right storm door for your home.

Beyond color and style, ventilation is an important feature to consider. That is why LARSON offers storm doors available in Full-View with interchangeable glass and screen, Screen Away®, Multi-Vent® and Single-Vent.

FULL-VIEW STORM DOORS
- Maximum viewing and ventilating area. Includes full screen that interchanges with the glass. Full-View storm doors allow you to showcase your prime door as well as seasonal wreaths. Decorative glass adds additional style to the front entry.

VENTILATING STORM DOORS
- MULTI-VENT®
  - Multi-vent® doors feature a full screen and adjustable glass, choose from top or bottom ventilation or both by easily adjusting the glass panels. You control the breeze for maximum comfort.

- SINGLE-VENT
  - This half screen option allows for bottom ventilation. The window and screen are part of the door so you will never need to store the screen or glass.

SCREEN AWAY
- RETRACTABLE SCREENS
  - The retractable screen disappears into the top cassette when not in use. Screen Away® offers the beauty of a clear view with the convenience of ventilation.

With French Door Conversion Kits, LARSON® storm doors are easily adapted for double-door entry applications. Each kit includes detailed installation instructions, all necessary hardware, astragal, and special drip cap. Refer to French Door Size Guide below for proper selection of French Door Conversion Kits.

### Measure existing French Door Opening

1. Measure full width of opening from jamb exterior trim where storm doors will attach to the trim.
2. Measure full height of opening from head exterior trim to threshold where storm doors will attach.
3. Compare your dimensions with the standard French storm door opening size guide. If your opening does not match a standard, you need custom French doors.

**Note:** Continuous wood shims up to 1/4" thick can be installed behind both Z-bars allowing a given width of standard doors to fit an opening 1/2" wider. Extra long screws will be needed to secure.

With a French Door Installation, you will have one Left Hinge door and one Right Hinge door. The astragal included in your French Door Kit replaces the latch side mounting rail included with each door. The full width drip cap included in the French Door Kit replaces the top drip caps included with the doors.

Insulating Storm Window Ordering Information

Storm window sizes are determined by measuring your existing window opening as shown below. Record opening width A first and opening height B second. Round down to the nearest 1/8".

LARSON® windows can be installed Blindstop (inside mount) or Overlap (outside mount) as shown right, or you can have the windows made to the exact tip-to-tip measurement desired.

When Measuring

Give exact opening size (width x height). Measure opening width at three locations (top, center, bottom); measure opening height (right, center, left), and order using the narrowest width and shortest height measurements (refer to Figures 2 and 3).

Oriel or Cottage type windows

To order storm windows with uneven glass inserts, measure down from top of window to center of meeting rail (Figure 4).

When Ordering

Provide opening size and specify blindstop or overlap application; OR

Provide Exact Tip-to-Tip size and specify with or without expander.

• All widths and heights ordered to the 1/16" will be downsized to the nearest 1/8".

Measuring Guide
Interior storm windows are custom built to ensure a tight fit. Sizes are determined by measuring your existing window opening as shown.
- Measure opening width at three locations (top, center, bottom).
- Measure opening height at three locations (right, center, left).
- Round the narrowest width and the shortest height down to the nearest 1/16” and provide these dimensions when ordering.

**Interior Commercial Storm Window**
**I900C**
Recommended installation depth is 1-1/4” without mullion bars and 1-5/8” with mullion bars. Some cutting during installation is required. Maximum tolerance for out of square opening is 3/8”.

**Interior Storm Window**
**I900/I900E**
Recommended installation depth is 1-in. No cutting required. Maximum tolerance for out of square opening is 1/8”.

*Tested to meet the uniform load structural test requirements of AAMA/WDMA/CSA 101/1.S.2 A440-11 Performance Level 15.
